

WEEK B · DAY 1 · MONDAY

The Warm-Up

Common ground, wants and needs, and a relaxed homeowner who is open to the presentation.

11:00 AM – 1:00 PM · Virtual on Zoom

Today

- The purpose of the warm-up
- Control points: how you keep the lead
- Set the frame: the intro
- The customer survey, as a conversation
- Practice: the warm-up on the Sales Training Customer

The purpose

- Create **common ground** with the homeowner
- Find out their **wants and needs** in a casual way, through normal conversation
- Get them to **relax**
- Get their minds **open** to go into the presentation

Control points

- A small, deliberate question that earns a quick “yes” and hands the lead back to you
- “Right?” · “Wouldn't you agree?” · “Fair enough?” · “Make sense?”
- Each yes is a micro-commitment: stack enough and the close is one more yes
- Whoever asks the questions controls the conversation

“What we are going to do tonight is tell you a little bit about who we are as a company, take photos of everything and show you all the options and types of materials that are available to you, while guaranteeing a 30-day price. However, first I need to ask you some questions to find out what your wants and needs are, so that I can customize the estimate for exactly what you want and not just what my boss or our suppliers want you to buy? Fair Enough? Let’s be clear I am not here to sell you on buying a roof, you already know you need one of those right? (Warm up with customer survey)

Customer Survey

Tell me what was it about the mail piece or Facebook advertisement that you received from us that caught your eye? _____.

I see you've owned the home since _____. Do you know how old the roof was when you bought it?

Why did you choose this home and this neighborhood?

So do you see this home as your forever home or do you see yourself moving anytime soon?

Have you done any upgrades or what upgrades if any do you plan to do?

Talk to me about how you feel about your homeowner's insurance?

Do you remember what you're paying for HO Insurance?

I know this next question is going to sound like it has nothing to do with your roof but I'll explain in a few minutes why it actually does. What is the highest electric bill and what's your lowest electric bill?

How long has your roof been concern?

(if 1 month or more)

How long has your roof been concern?

(if 1 month or more)

Obviously, you're very busy otherwise I'm sure an important concern you'd like to address right away?

What made you decide to have us out today?

When you choose to have work done to your house what are the 2 most import qualities you'll be looking for? Google reviews? Speed? Quality? Warranty? Etc etc

Which of these problems do you have?

Leaks _____ mold _____ insurance cost _____ damage
Maintenance _____, Energy Cost _____, Quality _____.

If there was a way to save you money by starting the project sooner rather than later, would you want to know about the savings?

When you find what you are looking at a price or term that fits comfortably in your budget, would you be opposed to starting right away?

A conversation, **not a form**

- React to their answers and follow up on what they say
- Share a little about yourself: that's where common ground comes from
- Listen for their wants and needs: you will use them in the presentation
- By the end they should be relaxed, comfortable and curious

PRACTICE + TONIGHT

Practice it out loud

- Sales Training Customer: **Warm-up: intro + customer survey**
- Stay on script: **the angle and the points**, in your own words

Tonight: run the warm-up once on your practice link, then read Slides 1–7 for tomorrow.

WEEK B · DAY 2 · TUESDAY

Slides 1–7

Energy Saver Package

How Much Money Will You Save?

Energy Savings with Radiant Barrier Foil

Consumers are less concerned about how energy barriers work than they are about their effect on utility bills. This is much less than the 95% reduction in attic radiant heat flow because other forms of heat flow contribute to the total cooling (or heating) load. Data can expect to vary with region. The following data provided by The *Tennessee Valley Authority*, Chattanooga, Tennessee on *Performance Testing of Radiant Barriers* demonstrates the savings possible for a typical home:

- All the Radiant Barrier configurations yielded sizable percent savings and statistically significant reductions in summer attic heat transfer compared to the non-RB case. Also, as the ambient temperature increases, the savings also increase.
- The Radiant Barrier under the rafters (RBR) was the best summer performer. It consistently showed heat flux reductions compared to the non-RB case of nearly 40% for almost all ambient temperatures and even showed savings during mild temperature and night summer conditions.

How Can I Pay?

- Cash or credit card, plus three financing lanes.

How Can I Pay?

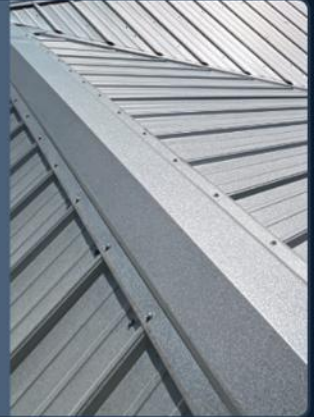

Cash or Credit Card

Financing Your New Roof

*No Credit Score Requirement Options
(in certain areas)

*Traditional Credit Financing
(rate and term based on credit score and income)

*Same as Cash and No Interest Options
(Can't be combined with other promotions, require great credit)

Ask for the Business — The Big Reveal

- The assessment sheet — roof-only vs. the whole package, then silence.

Ok Here We Are

Time for The Big Reveal

[Start Here](#)

Ok Here We Are

Time for The Big Reveal

Start Here

More Estimates

1. So you are serious about buying a roof then. You just want to make sure you get the best company with the best price
2. So you did like me right? You also liked the company and the product?
3. If I could call my boss right now and get him to do the roof for (half the price) could I earn your business today?
4. Ok so then you can make a decision today? You don't really need more estimates, what you really want is just the best deal.
5. Get them to give you a price and immediately state "ok not to exceed (add \$1000 to what they said)? Confirm BEFORE you call "IF I CAN DO THIS YOU WILL DO THAT"

CALL YOUR MANAGER AND SELL THEM A ROOF

The full presentation

- Warm-up, then Slide 1 through asking for the business
- Stay on script: the angle and the points, in your own words
- Keep control: ask, listen, lead back with a question
- Ask, then silence

PRACTICE + TONIGHT

Practice **it out loud**

- Sales Training Customer: **Slides 17–21: the Energy Saver package**
- Sales Training Customer: **The close**
- Sales Training Customer: **Full presentation (slide show)**
- Stay on script: **the angle and the points**, in your own words

Tonight: run the full presentation once on your practice link.
